

DFG Priority Programme *Quantum Dynamics in Tailored Intense Fields*

Application for a start-up grant / network funds 2021

These grants (up to 12 000 €) are targeted at junior postdocs and PhD students within the QUTIF network. Talented early-career researchers should be encouraged to remain in science and academia. To this end, the primary goal of these grants is to enable young researchers to define and implement their own research ideas.

Examples of possible items are:

- small equipment;
- science-related or soft-skill related travel and participation costs.

It is required that the scientific justification is independent of existing QUTIF projects or goes beyond these. According to the DFG guidelines, it is impossible to use DFG support to fund present-day basic equipment (such as, for example, office PCs) or to complete/repair existing non-DFG equipment.

Please use the form below or prepare your application along these lines. In addition, the application must include:

- a mini research plan of ca. 2 pages,
- a 1-2 page CV,
- for candidates who do not have earned their PhD degree yet: statement of support by a senior QUTIF participant.

Please send this application to the coordinator. The steering committee will decide on the applications.
